

TMX Datalinx Product Announcement

TMX Datalinx - Product Announcement Changes to CP/TSX Suite of Feeds

As a result of changes to the background delivery infrastructure, the sequencing of the CP/TSX suite of feeds (NW1, NE1, NE2, NF1, NEN) will change from weekly to daily.

Currently, sequencing begins upon system startup each Sunday at 5pm ET and increments until system shutdown at 8pm ET on Friday.

Once the new background infrastructure is implemented, sequencing will reset to 1 at midnight ET each day.

The changes to the background infrastructure and the resulting changes to the sequencing are scheduled to be implemented after the close of business on Friday February 9, 2018, effective for startup at 5pm ET, Sunday February 11, 2018.

Clients will not be required to make any changes to IP/Port information in order to continue receiving the CP/TSX suite of feeds. Clients will have to ensure they use the correct sequence numbers (same day) or date/sequence numbers (previous days) for retransmission requests. All other aspects of retransmission remain unchanged.

If you have any questions regarding the above, please contact [TSX Market Operations](#) for assistance at 416-941-4705.
