

TMX Operational Notice

Reminder - TMX Disaster Recovery Network Connectivity Test

As a reminder, TMX will be facilitating a pre-connectivity test on **Saturday, September 14, 2019**.

The purpose of the pre-connectivity test is to provide clients the opportunity to establish and confirm network connectivity to the Toronto Computing Facility (TCF) DR data centre.

TMX will simulate a “disaster” at the primary data centre and failover TMX’s primary trading and market data feed delivery systems to backup systems at the TCF DR site.

This activity is intended for clients to confirm DR site network connectivity. Clients are advised to verify using telnet to Unicast destinations (OE sessions; Feed Recovery Sessions). TMX does not support PING and therefore cannot be used for verification.

Pre-Connectivity Test - September 14th, 2019

Participants Start Time	10 h
Participants End Time	13 h

As long as testing is conducted between 10:00 am and 1:00 pm ET, no testing appointments are required.

TMX Market Operations will be available for support during the test. Participants are asked to advise the Technical Support Desk by phone or email once they have successfully completed connectivity testing.
