## **PRODUCTION ALERT - Issue Affecting CDF Omega and Lynx feeds**

### **Attention TMX Information Processor Clients**

Please be aware that Omega/Lynx experienced a startup issue this morning. As a result, TMX IP refresh was complete at both Markham (MCC) and Toronto (TCF) for CDF-OMG and CDF-Lynx feeds. There will be an expected mismatch between both sites for the feeds.

Data disseminated from each site will still be complete and accurate however, clients are advised that arbitration is not recommended between the two sites today on CDF-OMG and CDF-LYNX feeds for the remainder of the day. This issue only impacted CDF-OMG and CDF-Lynx feeds.

All other TMX IP feeds including CBBO, CLS, CDB are not impacted.
